Subject: TI - Attleboro, MA - NPDES Permit

David:

Thank you for your update regarding the timing for your proposed memo. To help ensure that the memo covers the issues that we discussed, it should address the following 4 points in particular. Please give me or Dave Turin a call if you want to discuss these points.

1. Information that documents the claim that TI cannot obtain a dry-weather sample due to ongoing wet-weather conditions. This could perhaps include data from the baffle level meter and data from the rain gauge, showing that water is coming over the CB-87R baffle due to storm events. Include a schedule for providing historical data, that was referred to as requiring calibration, if applicable.
2. A consolidated listing of corrective actions that have been taken since 2014, and planned actions for June/July 2020. As appropriate, include sources of inflow and flow measurement study results.
3. Identification of additional measures proposed beyond July 2020.
4. A list of repairs and other actions that cannot be undertaken because of access issues. The list should include the name of the property and efforts made to gain access.

To discuss the memo, we'd like to schedule a meeting for the following week. We are available in the afternoon on Monday the 17th, anytime on Tuesday the 18th, from 1 to 3 pm on Wednesday the 19th, in the afternoon on Thursday the 20th, and anytime on Friday the 21st. Please respond with the date and time that works best for you.

Sincerely,

Rachel Olugbemi  
Physical Scientist, Water Compliance section
